

## Process Sheet:

### Structure of a typical process sheet for manufacturing

1. Outlining the sequence of work.
2. Figuring out the assemblies and sub-assemblies involved and drawing a map to figure out where each one fits.
3. Determining the number of units to be produced.

**Process planning** is a preparatory step before manufacturing, which determines the sequence of operations or **processes** needed to produce a part or an assembly. ... A route **sheet** is a document which lists the exact sequence of operations needed to complete the job.

## Process Design
