

The method I use where the students own their learning and do active projects to be part of the learning process.

The learning process is as follows:

- Learning about yourself—Work from your strength and build the concept of peer learning
- Forming a team—build the structure, character, culture to work together
- Analysis of what problem you want to solve--- what is the root cause of the problem
- Problem solving – understand the basics of problem solving
- Testing & Reflection – learning to make things better
- Presenting your solution – presenting the teams work to the community
- Job integration and follow-up

During this learning process, we infuse life skills into the learning.

Discussion Scenarios

1. WATCH OR READ THE SCENARIO.
2. LISTEN CAREFULLY!
3. THEN, ASK YOURSELF...

How can I build depth into the conversation by...

- adding a new idea inspired by what a peer said?
- posing a question about what a peer has said?
- making a connection to what a peer has said?
- politely disagreeing with what a peer has said?
- clarifying what a peer has said?
